

# Coins

Coin-specific metadata extend the [metal-specific metadata](#) and are a subset of the [Nomisma ontology](#) and intended to be filled in the records of the coin in a numismatic data infrastructure using this ontology based on the type series and the coin's type series ID. The equivalent in the Nomisma ontology is given by the prefix `nmo`. Descriptions are taken from the [Nomisma ontology](#) and the [controlled vocabulary of Nomisma](#) will be used for the respective properties.
