

History

Version 0.3.2

- Merging of B4.3 chemistry_icp_isotope into B4.2 chemistry_compound to record values measured e.g. by mass spectrometry but reported as elements rather than isotope together with values reported by isotope
- Renumbering of metadata fields B4.4 to B4.8 to B4.3 to B4.7 as consequence of the above change
- Addition of new B4.8. chemistry_relative_value to record relative compositional values (e.g. +++, tr, <0.4, bdl = 0.5 wt%)
- Improved definition of B4.6 chemistry_uncertainty_sigma
- Improved definition of B6.4 lia_ratio_uncertainty_sigma

Version 0.3.1

- Addition of new OP3.3 material_pigment_composition_chromophore
- Change field type of AS 3.1 assemblage_investigation_unit_type to free text
- Change scope of OP4.2 material_pigment_composition_compound to all chemical formulas (or names) and its field type to free text

Version 0.3

- Addition of OP5.3 material_pigment_production_details
- Refined definition of some metadata
- Addition of automatic pdf export of the metadata profile and download button on start page
- Addition of citation information
- Correct formatting and broken links
- Publication on Zenodo (<https://doi.org/10.5281/zenodo.18069848>)

Version 0.2

- Integration of Community feedback

Version 0.1

- Initial version of metadata profile for community feedback
